### Minimum Code Requirements for Additions and Alterations of Single Family Dwellings

This list is a guide for minimum requirements per current County of Kern Code of Building Regulations, based on the 2019 California Code of Regulations & California Building Standards Code. It is not intended as an all-inclusive list of applicable code requirements.

- **Per the 2019 KCCBR 17.06.200**, provide a minimum 2% slope away from building foundations a minimum of 10 feet or to an approved drainage discharge.
- **Exterior door landings are required**, as wide as the doorway and at least 36” in the direction of travel per CRC R311.3. Landing must not be more than 1-1/2” lower than the threshold. If the door does not swing over the landing a maximum of 7-3/4” is permitted.
- **Main exit door shall provide a minimum clear width of at least 32” (2’-8”) and a minimum clear height of at least 78” (6’-6”)** per CRC R311.2.
- **Halls** shall be minimum 36” wide per CRC R311.6.
- **Per CRC R305** a minimum ceiling height of 7 feet is required (if a bathroom/toilet/laundry room 6’-8” min is required).
- **Windows for natural ventilation & lighting** shall be sized in accordance with CRC R303. (4% Ventilation, 8% Lighting)
- **One window in each bedroom** shall have an openable area of 5.7 square feet minimum with minimum of 20” width and 24” height, and not more than 44” from the finished floor to the sill per CRC R310.2. A 4030 “single-hung” or “horizontal slider” does NOT meet this requirement.
- **Bedroom windows at grade floor** shall have a minimum net opening of 5 square feet with minimum 20” width and 24” height dimensions per exception to R310.2.1. A 4030 “single-hung” does NOT meet this requirement.
- **Safety (tempered) glass** shall be installed in all locations subject to human impact per CRC R308.4.
- **Per CRC R302.1** projections 2 to 5 feet from the property line require 1 hour fire resistance on the underside. Walls less than 5 feet require 1 hour fire resistance. Openings from 3 to 5 feet may be a maximum of 25% of the wall area. Openings in walls less than 3 feet from the property line are not permitted.
- **Smoke Alarms** shall be installed in bedrooms. Smoke alarms and carbon monoxide alarms shall be installed outside each sleeping area, upper floors, and lower floors. Alarms shall be interconnected per CRC R314 and/or R315.
- **Fireplace chimneys** shall have spark arresters and extend at least 2 feet higher than any portion of a building within 10 feet, but shall not be less than 3 feet above the highest point where the chimney passes through the roof per CRC R1003.9 & R1001.12, the fireplace shall be fire-blocked where penetrating the ceiling and floors.
- **Stairs and handrails** shall conform to CRC R311.7:
  - **RISE = 7.75”** maximum and **RUN = 10”** minimum
  - CLEAR WIDTH = 36” minimum
  - HEADROOM = 6’-8” minimum
  - HANDRAILS = 34”-38” above landings and the nosing of treads
  - Provide “positive” top-of-stairway connection
  - Provide “positive” bottom-of-stairway connection
  - Useable spaces under stairs shall be lined on the inside with 1/2” gypsum board per CRC R302.7.
- **Per CRC R302.11**, the stud spaces between stringers shall be fire blocked.
- **Per CRC R702.7**. Class I or II vapor retarders are required on the conditioned space side of exterior walls in Climate Zones 14 & 16.
- **Per CRC R807.1**, a minimum 22”x30” attic access with 30” headroom is required where the vertical height of the attic is at least 30”. If there is mechanical equipment in the attic, the opening must be large enough to remove the largest piece of equipment with a minimum access size of 22”x30” per CMC 304.4.
- **Per CRC R317.1**, minimum of 18” under-floor clearance from ground to bottom of floor joists, 12” to bottom of girders; unless preservative-treated
- **Per CRC R408.4**, minimum 18”x24” under-floor access or minimum 16”x24” perimeter access when required (22”x30” when mechanical unit present under-floor per CMC 304.4).
- **Per CRC R408.2**, screened vents required at under-floor areas where 1 square foot of ventilation is provided for every 150 square feet of under floor area. Ventilation to be approximately equally distributed on at least two opposite walls. One vent required within 3 feet of each corner.
- **Per KCCBR 17.06.171**, a separation of 5/8” Type X gypsum board shall be provided between the dwelling and garage from floor to roof, or on the garage ceiling and all common walls with the dwelling unit. A 1-3/8” solid core or 20 minute fire rated self-closing and latching door is required (if door is provided) between the garage and dwelling. The door must not open into sleeping rooms.
- **Per CRC R703.7.2**, stucco applied over metal lath or wire fabric lath shall be three-coat stucco system with weep screeds over 2 layers of Grade D paper.
- **Any one- and two-coat plaster wall finishes** shall be installed per manufacturer’s recommendations and according to approved listing information or ICC report.
- **Per CRC R404.1.3.3.1**, minimum concrete compressive strength shall not be less than 3,000 psi for concrete basement or foundation walls and 2,500 psi for slab on grade foundations Per CRC R402.2.
- **Per CRC R506.1**, concrete slabs shall be a minimum of 3½” thick and a vapor retarder is required per CRC R506.2.3.
- **Per CRC R403.1.4**, the minimum depth of footings shall not be less than 12” below undisturbed ground surface, and at least 12” wide per CRC Table R403.1.
- **Per CRC R403.1.5**, a stepped footing is required when the slope exceeds 1 vertical in 10 horizontal (1:10)
- **Per CRC R403.1.3.3**, one #4 bar on top and bottom or a single #5 bar or two #4 bars in the middle third.
- **Anchor bolts** shall be installed per CRC R403.1.6, ½ inch minimum diameter with 7 inch minimum embedment.
• Per CRC 403.1.6.1.3”x3”x.229” steel plate washers are required on all anchor bolts in a braced wall line.
• Per CRC R312.1, guards shall be provided when stairs or landings are over 30’ above grade. Openings shall not permit a 4” sphere to penetrate through. Guards shall be minimum 42” high, except when also serving as a handrail.
• Per CRC R806.2, the attic shall be provided with free ventilation that is at least 1/150th of the area of the space ventilated. The ventilated area may be reduced to 1/300th of the area of the space ventilated only if at least 40% -50% of the required ventilation is located no more than 3 feet below the ridge or highest point of the space or in climate zones 14 and 16 a vapor retarder is installed on the warm-in-winter side of the insulation. A 1” air gap between the insulation and the roof sheathing at vents is required.
• Per CRC R317.1, treated or naturally durable wood is required, for wood framing resting on concrete or masonry exterior foundation walls and are less than 8” from exposed ground, & sill plate materials.
• Per CRC R317.1, wood siding must be at least 6” above earth, unless it is treated wood or naturally durable.
• Per CRC R602.9, foundation cripple walls over 4 feet high are considered an additional story when sizing studs. If over 14” high, the cripple wall should be braced as for a first story. If 14” or less in height, the wall must be continuously sheathed or of solid blocking.
• Per CRC R317.1, ends of wood girders entering masonry or concrete walls should be provided with 1/2” air space on top, sides, and ends unless the girder is treated wood or of naturally durable wood.
• Per CRC R502.9, all post-to-beam/girder connections are required to be “positive” to resist lateral displacement.
• Construction shall conform to the provisions in the CRC (conventional construction) or the requirements of the CBC, if engineered.
• Nailing shall conform to the requirements of the CRC Table R602.3 (1).
• Attic, under-floor and roof-mounted furnaces shall be installed, accessed, and provided with combustion air as required by the CMC.
• Per CPC 507.13, spark or gas-fired equipment in garage shall be elevated on minimum 18” non-combustible platform.
• Electric service requires minimum 100-amp panel with permanently labeled circuits and disconnects.
• Grounding and bonding – concrete encased electrode/water bond and gas piping bond per CEC.
• Provide at least one branch circuit for each 500 square feet of floor space.
• Per CEC 210.11(C)(2), install dedicated 20-amp circuit to laundry room for appliance outlets.
• Install disposal/dishwasher circuit.
• Per CEC 210.52(B)(3) install at least two small appliance circuits to serve kitchen counter outlets (note: may also serve kitchen, pantry, breakfast room, dining room).

### Minimum Code Requirements for Additions and Alterations of Single Family Dwellings

- Per CEC 210.11(C)(3), install at least one 120-volt, 20 amp circuit to serve bathrooms.
- Per CEC 210.8(A), GFCI outlets required in bathrooms, kitchen-serving countertops, garage, basement, and exterior.
- Convenience outlets shall be located and spaced per CEC 210.52 where:
  - no point along the floor line is more than 6 feet from an outlet
  - no wall space 2 feet or more is without an outlet
  - outlets serving counter islands and peninsular spaces are required
  - laundry, exterior, garage, bathroom, and HVAC outlets are required
- Arc-fault circuit interrupters (AFCI) are required at all branch circuits supplying outlets in kitchens, family rooms, dining rooms, living rooms, parlors, libraries, dens, sunrooms, bedrooms, recreation rooms, closets, hallways, or similar rooms or areas per CEC 210.12(A).
- Building envelope, lighting, HVAC, and service water systems shall conform to the California Energy Standards and energy documentation provided (prescriptive method or computer performance method).
- Lighting shall comply with the latest energy conservation measures. All light fixtures and switches throughout the residence to be identified. See lighting table below. See lighting table below:

<table>
<thead>
<tr>
<th>Per CEC 150.0(k)1A, All luminaires must be high-efficacy in accordance with CEC Table 150.0-A</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>RECESSED DOWNLIGHTS</td>
<td>• Must not contain screw based sockets</td>
</tr>
<tr>
<td></td>
<td>• Must contain JA8-2019-E rated bulbs</td>
</tr>
<tr>
<td>ENCLOSED LUMINAIRES</td>
<td>• Must contain JA8-2019-E rated bulbs</td>
</tr>
<tr>
<td>JA8 LUMINAIRES</td>
<td>• All must be controlled by a dimmer or vacancy sensor</td>
</tr>
<tr>
<td>UNDER CABINET LIGHTING, EXHAUST FANS</td>
<td>• Must be switched separately from other lighting</td>
</tr>
<tr>
<td>BATHROOMS, GARAGES, LAUNDRY ROOMS, AND UTILITY ROOMS</td>
<td>• At least one luminaire must be controlled by a vacancy sensor</td>
</tr>
<tr>
<td>OUTDOOR LIGHTING</td>
<td>• Must be controlled by a manual on/off switch and also one of the following:</td>
</tr>
<tr>
<td></td>
<td>➢ Photocell with motion sensor</td>
</tr>
<tr>
<td></td>
<td>➢ Photocell and automatic time switch control</td>
</tr>
<tr>
