**SMALL RESIDENTIAL ROOFTOP SOLAR ENERGY SYSTEMS**  
**CERTIFICATION FORM**

In response to AB 2188 and the mandate to require only one inspection for eligible small residential rooftop solar systems (10 kw alternating current or less), completion of this form certifies all solar racking arrays and modules have been flashed, anchored and attached per the approved plans, manufacturer's specifications and industry standards. All work that is covered and not easily made accessible to the building inspector, must be certified by the contractor that it was performed properly.

If you opt to forego the certification, the building inspector must have access to perform adequate inspections of random anchors, flashing, grounding, etc. If it is not accessible for inspection, and the inspection is failed by the building inspector, subsequent inspections need not adhere to the one-inspection requirement. If any inspection is failed by the inspector, it is no longer eligible for Certification. Please leave this signed Certification Form with the job card.

Permit Number: \_\_\_\_\_

Project Address: \_\_\_\_\_

I hereby certify the rooftop solar racking arrays, including stand-offs, flashing, and anchorage, have been installed according to the approved plans, manufacturer's specifications, and industry standards.
